

## Installation of your certificate with Plesk Panel Steps

When you receive your SSL certificate by e-mail, save it on your local machine or network.

## Follow The Steps Below to Install Your Certificate:

- Logon to the Plesk Panel and go to the SSL Certificates repository (Domains > Domain name > SSL Certificates).
- 2. Select the appropriate Certificate name from the repository list.

2 SSL	move s certifica K	SSL Co ates to C	ertific otal A	Certificate Name ^	ch

- 3. Click Browse in the middle of the page and navigate to the location of the saved certificate.
- 4. Select it, and then click Send File.
- 5. You also have the option to copy and paste the contents of your certificate in the text box below.
- 6. This will upload and install the certificate against the corresponding private key.
- Return to the domain's administration screen (Domains > Domain name) and click Web Hosting Settings.

8. Select the SSL certificate that you wish to install from the Certificate menu.

## If there is no Certificate menu on the screen, this means that you are on a shared hosting account; therefore, you need to upgrade your hosting package and purchase a dedicated IP address from your provider.

9. Select the SSL support check box and click OK.
